Subject: Fwd: bee hives

John,

The subject of DOE approval for individuals to operate bee hives on the ORR came up at the Resource Management Council meeting this morning. Bill Thompson, the K-25 Area manager raised the question because of a hive near K-25. The attached message is Pat Parr's response to Bill and Jack Newman. Jack is checking. He thinks the individuals need written approval from DOE.

I cautioned Jack not to try to justify the honey operation on the basis that we want the honey for monitoring. We have no requirement driving us to monitor the honey; however if DOE allows the honey operation to continue, I would think we would want to sample the honey to know the contents. Seems like we may want to include the information in the Special Studies Section of the Annual Site Environmental Report. Let me know if you agree with my remarks to Jack. I told Jack and Pat that I would talk to you.

Jim

P.S. - Bill Laing had someone "mark up" Tables 5.1 through 5.5 of the EMP Draft and fax them to me today. I'll include them in the revised EMP.

Subject: Fwd: Re: bee hives

Pat,

I agree with Bill. I'm not a lawyer nor am I an expert on contracts; however I also think we are vulnerable. If DOE personnel agree that we need honey samples from the Oak Ridge Reservation, we will work out a way to collect the honey without using hives which are being used for public sale.

I understand there are two employees with hives on the ORR. I recommend that someone from the contracts office meet with each employees' supervisor and with each employee, and work out a way to remove the hives from the ORR.

We do need to remember that verbal approval was given to these gentlemen evidently by both DOE and MMES management personnel. Seems to me we are obligated to work with them as much as possible to minimize the impact on their hives during the removal process. Hopefully everyone will cooperate. I know nothing about beekeeping. If there are certain times during the year when it is better to move hives, I suggest we try to work out a plan which is acceptable to all concerned.

Please keep me informed.

Jim

Subject: Private Bee Hives On the Oak Ridge Reservation

It has come to the attention of the Resource Management Organization (RMO), as the result of a K-25 DOE review, that three Energy Systems employees are maintaining bee hives on the Oak Ridge Reservation (ORR). Hives are being maintained at four locations on the ORNL portion of the ORR and one location on the K-25 portion of the ORR. To the best of our knowledge there are no written contracts allowing these individuals to use ORR land for these purposes. Apparently verbal concurrences were given many years ago allowing them to use the land.

we are going to allow the use of the ORR for bee keeping we should at the very least formalize the practice with written contracts. The contracts should also be competed. We know of no justification for sole source contracts.

The RMO questions whether or not Energy Systems should allow bee keeping operations by private citizens to continue at all.

It is

our understanding that honey from some of these hives was sampled in 1984 and again in 1993 and that the levels of contamination were within acceptable norms. The RMO questions why Energy Systems should be involved in these activities and recommends that the bee keeping activities be terminated with the concurrence of ORO. If the bee keeping by private citizens for commercial sale is to continue we believe that the honey from each of the locations should be sampled annually.

Please have your staff provide us with your position on this matter. Should we terminate the activities, competitively bid the activities, or sole source them to the current bee keepers (justification for the sole source will be difficult).

Subject: Location of Apiaries on the DOE Oak Ridge Reservation

Todd,

It came to the attention of the Resource Management Organization several months ago that years ago bee hive keepers were apparently given verbal approval to maintain bee hives on portions of the Oak Ridge Reservation (ORR) assigned to K-25 and ORNL. Honey from the hives is being sold to the public. There are four apiaries on the ORR. Three of the apiaries consist of 20 colonies of bees and the forth apiary consists of 8 colonies. Contamination studies performed by MMES and its predecessor UCND show low levels of radiation in the honey for the years 1983, 1993 and 1994. The RMO has taken the position that MMES should not allow commercial bee keeping on the reservation for liability reasons. We further believe that if the practice is to continue formal competitive contracts will be required and annual contamination sampling will have to be performed by MMES.

Bob Eby of K-25 has concurred with the RMO position that the beehives be removed from the ORR. We anticipate concurrence from ORNL. I wanted to make you aware of the subject even though we are unaware of any bee hives on the portion of the ORR controlled by Y-12. If you have a position on the subject I would appreciate hearing from you or your staff.

Subject: Re: Location of Apiaries on the DOE Oak Ridge Reservation

Bill,

Sounds like a sticky situation, but we allow the public to hunt deer only on an equal opportunity basis and verify contamination levels. I don't see why we would allow harvest of honey with any less attention. We either need to manage what is done or get the bee hives off the reservation.

Todd

Subject: Re: bee hives

Pat,

It appears that Kerr may have learned of the Energy Systems' concerns and may be attempting an end run. From a contractual point of view such a meeting could be construed to be inappropriate. If we were to allow bee keeping to continue on the reservation we would have to compete the contract. Such a meeting could be construed as giving Kerr an advantage.

We have already concluded that Energy Systems can provide the honey to be sampled if sampling is required. Do you believe there is justification for the meeting Kerr is seeking to arrange?

It appears to me that Energy Systems has a significant vulnerability on this subject.

From: F. R. O'Donnell, 4500S, MS-6102, ORNL (6-2132) *FRO*
Subject: Potential Doses From Eating Honey

Per your request, we have calculated the potential 50-year committed effective dose equivalents associated with ingestion of 1.0 kg of honey from each of the hives sampled during 1984, 1993, and 1994. (One kilogram of honey likely is more than will be consumed by all but a few persons, such as beekeepers. According to the 1992 edition of the *Public Health Assessment Guidance Manual*, the average individual in the United States consumes about 5 g/day or 1.8 kg/year of all sugars.) The results are listed in the attached table by nuclide group: Group 1, which includes ^3H , ^{60}Co , and ^{137}Cs ; Group 2, which includes gross beta (taken to be ^{90}Sr) and gross alpha (taken to be ^{232}Th) activities; and Group 3 which consists of ^{40}K . A blank value for a given group indicates that no data were reported for that group.

The maximum 50-year committed effective dose equivalent from eating 1.0 kg of honey was calculated to be about 0.2 mrem. Almost all of the doses from the 1993 and 1994 data were due to the unidentified gross beta activity, which we took to be ^{90}Sr . Gross beta and alpha activities were not reported in the 1984 data. Gross alpha activity was reported only in the 1993 data, and ^{40}K activities were reported only in the 1994 data. (Potassium-40 should be regarded solely as a naturally occurring radionuclide.)

I trust the above information and the attached table will be sufficient for your needs. If you have any questions or need additional calculations or information, feel free to contact me at your leisure.

1984	North side of White Oak lake	0.0047		0.0047		0.0047
1984	SW of ORNL south parking lot	0.0060		0.0060		0.0060

Jim - please replace this sheet - discard previous sheet.

Notes: J. Rogers

11/28/94

- Ave. deer weight = 45 lbs of edible meat or 20 kg -
In 1991 the Ave. concentration of Cs, Co, & Sr in
deer released would result in a person receiving
0.14 mrem from eating the entire Average deer -
- A person eating one kg. of honey (2.5 lbs) from
the hives around ORNL and K-25 would
receive a dose of the same order of
magnitude. - Up to 0.21 mrem.

Subject: bee hives

I received a call from Howard Kerr this morning- he wanted to set up a time I could attend a meeting with him and Kevin Dillon (TDEC) to talk about bee hives on the ORR and uses for monitoring. He has talked with Kevin Dillon who is "anxious to see environmental surveillance done with bees- even wants to be directly involved". He plans to invite Murphy. I suggested that he contact Jim Rogers also.
